Summary:

Computer Science graduate from Western New England University with hands-on experience in software design, parallel computing, and database systems. Proficient in Python, Java, and C++, with practical knowledge of Agile/SCRUM workflows and microservices architecture. Consistent academic honors recipient seeking an entry-level software role where I can contribute technical skills and continue growing as an engineer.

Relevant Skills:

Languages: Python, Java, C++

Databases: MySQL

Tools & Platforms: GitHub, GitLab, VScode, OPNSense, WireShark

Concepts & Frameworks: Agile/SCRUM, Microservices, OpenMP, MPI, Vibe Coding, Bash, Shell Scripting, Version Control, REST API, OOP, Data Structures and Algorithms

Projects:

Bear Necessities Market Food Pantry (Java, Git, SDLC, CIDI)

- Streamlined operations for a campus food pantry serving about 50 customers per month, by building and maintaining a multi-module database system for guest records, inventory, and performance reporting, as part of a 5-person Agile team.
- Automated dependency management across all 22 subprojects, by implementing Renovate Runner end-to-end as the sole owner of the integration.
- Maintained understanding of project requirements throughout the 15 week sprint cycle, by holding consistent, ongoing communication with the product owner.

Campus Security Safety App (HCI Design, HTML prototype)

- Enabled faster, more organized handling of campus safety requests by leading the design of a ticketing app for a 4-person team, where students submit requests and officers receive and respond to them.
- Conducted stakeholder interviews with campus police to identify pain points and define feature requirements, grounding the design in real user needs
- Spearheaded documentation throughout the project, maintaining clear records of design decisions and development progress

Portfolio Website (HTML, VibeCoding)

- Built and deployed a professional portfolio site on GitHub Pages, structuring a multi-page site (resume, portfolio, and categorized blog) with custom navigation, YAML configuration, and Markdown/HTML content.
- Diagnosed and resolved a number of build conflicts, including Markdown rendering and GitHub Pages' pagination requirements.
- Used AI-assisted development as a learning tool to build proficiency in HTML and YAML configuration.

Education:

Western New England University, Springfield, MA

May 2026

Bachelor of Science in Computer Science

President's List in the Spring 2023 and Spring 2024

Dean's List in the Fall 2024, Spring 2025, Fall 2025 and Spring 2026

Certifications:

CompTIA Network+ (*In Progress - est. completion September 2026*)

Experience:

CareFree Small Buildings

2026 - Present

Carpenter

- Lead construction projects, supporting framing, finish work, and general site tasks from blueprint to completion
- Collaborate with a small crew to coordinate task sequencing and meet project deadlines

Tree House Brewery

2024 - 2025

Seasonal Farm Hand

- Managed care and upkeep of produce assets across a large-scale farm operation
- Engaged with production managers to discuss industrial network security practices, gaining real-world exposure to securing industrial systems
